

CL205 - Operating Systems Lab

Task#08

Write a shell script to create a file with extension .c. Copy contents(c code) from another file to this file. Now use if statement ask user if user enter 1 just compile it. If user enters 2 compile it and run it. If user enters 3 just print the contents of the original file. Otherwise print the contents of the current directory. Perform the same task using switch inside a function.

Note: Both of the filenames must be passed as parameters to the script.
